Cinnamon

Cinnamon is a small evergreen tree 10–15 metres (32.8–49.2 feet) tall, belonging to the family Lauraceae, and is native to Sri Lanka, India, Bangladesh, and Nepal. The bark is widely used as a spice due to its distinct odour.

The leaves are ovate-oblong in shape, 7–18 cm (2.75–7.1 inches) long. The flowers, which are arranged in panicles, have a greenish colour, and have a distinct odour. The fruit is a purple one-centimetre berry containing a single seed.

Cinnamon has been known from remote antiquity, and it was so highly prized among ancient nations that it was regarded as a gift fit for monarchs and other great potentates. Cinnamon is native to India.

Arab traders brought the spice via overland trade routes to Alexandria in Egypt,.....

where it was bought by Venetian traders from Italy who held a monopoly on the spice trade in Europe

Cinnamon bark is widely used as a spice. It is principally employed in cookery as a condiment and flavouring material. It used in the preparation of chocolate, especially in Mexico, which is the main importer of true cinnamon. It is also used in the preparation of some kinds of desserts, such as apple pie and cinnamon buns as well as spicy candies, tea, hot cocoa, and liqueurs

Service Foods import its cinnamon range from India in foodservice and bulk manufacturing size packaging.
